

LENSEC Showcases Perspective VMS™ v3.0 at ISC West 2017

LENSEC Will Participate in SIA's New Product Showcase

FOR IMMEDIATE RELEASE - Houston, Texas, USA – Tuesday, March 14, 2017

With the release of Perspective VMS version 3.0, LENSEC is showcasing their enterprise-level video management software at ISC West 2017. Every year the Security Industry Association hosts the New Product Showcase during ISC West in Las Vegas, Nevada. The event started in 1979 to recognize innovative products, services, and solutions in electronic physical security. As a member of SIA, LENSEC is proud to take part in the SIA New Product Showcase this year.

LENSEC has redesigned their flagship product Perspective VMS, building it exclusively on an HTML5 rich application. While HTML5 is the current standard for web development, it is uncommon to see security applications that achieve true enterprise status by leveraging the HTML5 development platform. This breaks ground in the physical security industry. PVMS allows security integrators and end-users to easily deploy and manage their security video via a thin-client application.

LENSEC's Chief Product Officer Jeff Kellick says, "LENSEC is thrilled to continue our tradition of providing a full-featured software platform for managing video surveillance and data via modern web browser technologies. Flexibility is key as users and administrators can navigate all of their day-to-day operations and advanced security management from any PC on their network using their personalized secure login credentials."

With Version 3.0, Perspective VMS leverages HTML5 to display IP security video using modern web browsers, such as Google Chrome and Internet Explorer. Perspective VMS continues to allow full functionality of live video streaming, archived video playback, map-based integration, dynamic reporting, logical workflows, and comprehensive systems administration. All these features are accessible from a web browser without relying on thick client software or browser plug-ins.

LENSEC physical security experts will demonstrate Perspective VMS in Booth #24099 during the exhibit at ISC West. We encourage security integrators, technology partners, security consultants, engineers, and other exhibit attendees to come by our booth to experience the power of perspective. Our team is available to answer questions and demonstrate PVMS's capabilities.

About LENSEC

Founded in 1998, LENSEC is an industry pioneer of IP-based video surveillance solutions for many vertical markets including local governments, school and university campuses, healthcare facilities, commercial properties, critical infrastructure, and more. LENSEC's Perspective VMS enables secure remote access and real-time collaboration with first responders during security events.

If you would like to learn more about Perspective VMS Version 3.0, you will be able to find detailed information on our website: www.LENSEC.com/PVMS.
