

## LENSEC Announces BadgePass Integration With Perspective VMS®

*BadgePass Access Manager Features Will Be Monitored in PVMS*

**FOR IMMEDIATE RELEASE - Houston, Texas, USA – Tuesday, August 1, 2017**

LENSEC is pleased to be partnering with BadgePass for software integration. Our development team is incorporating key features of the BadgePass Access Manager software into Perspective VMS® in the next software release scheduled for August 2017.

This software integration is important to ISG members that are planning to use both software products. It is also important to LENSEC as the integration will bring BadgePass feature capabilities into PVMS. Users will be able to pull access control events into the VMS for monitoring and forensic investigation. In addition, Perspective VMS® will allow users to place doors onto maps and toggle door locks.

LENSEC Chief Product Officer Jeff Kellick understands the importance of a strong partnership between the two companies. Kellick says, "We will continue to look for future feature enhancements that are advantageous to BadgePass, LENSEC, and our joint partners."

LENSEC has been a pioneer in the physical security industry, delivering an IP video management software in the early days of network convergence. In 1998, the company was founded and began developing software to stream security video via the internet. In 2011, LENSEC released the first version of Perspective VMS®.

PVMS was built as an enterprise-level software and designed with an open architecture. We've continued to build on the features offered to our customers. Listening to our partners allows LENSEC to glean best practices and adjust to incoming feature requests. This is a value that LENSEC is committed to continuing. Kellick says, "We get some of our best software features from requests that have come from our customers in the field. Perspective VMS® is a valuable asset to our customers because of the input we have received from our partners."

BadgePass Access Manager provides the ability to lockdown secure areas and doors with a full system including software, access control panels, readers, and locks. Enabling key BadgePass features within Perspective VMS® is designed to help make both software environments more valuable to end-users.

With this combination, security integrators are now able to bring a complete solution to their customers. The power of Perspective VMS® and BadgePass Access Manager software combined really gives our partners a tactical advantage in the physical security market.
