

LENSEC Announces Software Integration With Galaxy Control Systems

Bi-Directional Integration Delivers Access Control and Video Surveillance Across Security Systems

FOR IMMEDIATE RELEASE - Houston, Texas, USA – Tuesday, January 16, 2018

LENSEC announces joint integration between its enterprise-class video surveillance software, Perspective VMS®, and Galaxy Control Systems products, Cloud Concierge and System Galaxy Software.

The integration will be officially launched at Intersec 2018 in Dubai in January. LENSEC and Galaxy Control Systems will be exhibiting at the international trade show January 21-23, 2018 in booth S1-C20.

Software integration for Perspective VMS® and System Galaxy is a bi-directional integration that enhances both physical security solutions. User security cameras are configured through the access control software to alarm and push video to the display using the video management software when event activity is detected. Conversely, Perspective VMS® will display alarms and device status generated by the System Galaxy and Cloud Concierge access control software.

Chief Product Officer, Jeff Kellick explains that LENSEC continuously seeks out product integrations that are advantageous to customers and the physical security industry. Kellick says, "We are excited about this product integration, especially given Galaxy Control Systems' leadership in the marketplace. LENSEC is pleased to be able to offer this greatly expanded functionality by working with Galaxy."

Rick Caruthers, Executive Vice President for Galaxy Control Systems says, "This new integration is unique in the industry in that two manufacturers – Galaxy and LENSEC – have created a solution with multiple ways for an end-user to monitor, detect, and respond to security incidents in real-time." Caruthers describes the integration as "a complete, real-time security management solution for end-users and security integrators, with scalability and flexibility for enterprises of all sizes."

Perspective VMS® is an intuitive and scalable physical security platform that provides situational awareness and the ability to monitor live or recorded video from anywhere in the world. It is appropriate for small, single-site deployments, mid-tier security projects or multi-site enterprise security environments.

System Galaxy is a complete, enterprise-class access control and security management solution. Cloud Concierge is a powerful suite of cloud-based access control services offered by Galaxy Control systems that provides a range of capabilities for real-time monitoring and management of access control devices from anywhere via PC, tablet, or mobile phone.

If you are interested in learning more about Perspective VMS®, please visit LENSEC.com/PVMS.

If you are interested in learning more about System Galaxy and Cloud Concierge, please visit www.galaxysys.com.

For an opportunity to see software integration in action, please plan to visit our physical security specialists at Intersec 2018. LENSEC and Galaxy Control Systems will both be located on the exhibit floor in booth S1-C20 during the show. Intersec will be located at the Dubai International Convention and Exhibition Centre in Dubai, UAE from January 21-23, 2018. Please plan to join our teams during the exhibit.
